Download:<https://drive.google.com/drive/folders/1PXo2CdJp-RE3hybnjjGiHV7uk7r2geY-?usp=sharing>**Question: 12** HOTSPOT

You plan to deploy the backup shown in the following exhibit. Use the drop-down to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point. Answer: **Question:**

13 HOTSPOT You have the application architecture shown in the following exhibit. Use the drop-down to select the answer choice that completes each statement based on the information presented in the graphic. NOTE: Each correct selection is worth one point.

Answer: **Question: 14** HOTSPOT You are designing an Azure web app. You plan to deploy the web app to the Europe Azure region and the West Europe region. You need to recommend a solution for the web app. The solution must meet the following requirements: Users must always access the web app from the North region, unless the region fails. The web app must be available to users if an Azure region is unavailable. Deployment costs must be minimized. What should you include in the recommendation? To

answer, select the appropriate options in the area. NOTE: Each correct selection is worth one point. Answer: **Question: 15**

HOTSPOT You deploy Azure service by using Azure Resources Manager templates. The template reference secrets are stored in Azure Key Vault. You need to recommend a solution for accessing the secrets during deployments. The solution must prevent the users who are performing the deployments from accessing the secrets in the key vault directly. What should you include in the recommendation? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.

Answer: **Question: 16** DRAG DROP You have an Azure Active Directory (Azure AD) tenant. All user accounts are synchronized from an on-premises Directory and are configured for federated authentication. Active Directory Federation Services (AD FS) servers are published for external connection by using a farm of application proxy servers. You need to recommend a solution to monitor the servers that integrate with Azure AD. The solution must meet the following requirements: Identify any AD FS issue and their potential resolutions. Identify any directory synchronization configuration issues and their potential resolutions. Notify administrators when there are any issue affecting directory synchronization or AD FS operations. Which monitoring solution should you recommend for each server type? To answer, drag the appropriate monitoring solution to the correct types. Each

monitoring solution may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 17** Your network contains an on-premises Active Directory forest. You discover that when users change jobs within your company, the membership of the user group is not updated. As a result, the users can access resources that are no longer relevant to their job. You plan to integrate Active Directory and Azure Active Directory (Azure AD) by using Azure AD Connect. You need to recommend a solution to ensure that group owners are emailed monthly about the group membership they manage. What should you include in the recommendation? A. Azure AD Identify Protection B. Tenant Restrictions C. Azure AD access reviews D. Conditional access policies Answer: C **Question: 18** DRAG DROP

You need to design an architecture to capture the creation of users and the assignment of roles. The captured data must be stored in Azure Cosmos DB. Which Azure services should you include in the design? To answer, drag the appropriate services to the correct targets. Each service may be used once, more than once, or not at all. You need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 19** DRAG DROP

A company named Contoso, Ltd. has an Azure Active Directory (Azure AD) tenant that uses the Basic license. You plan to deploy two applications to Azure. The application has the requirements shown in the following table. Which authentication strategy should you recommend for each application? To answer, drag the appropriate authentication strategies to the correct applications. Each authentication strategy may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 20** You have an Azure subscription that contains a custom application named Application1. Application1 was developed by an external company named Fabric, Ltd. Developers at Fabric were assigned role-based access control (RBAC) permissions to the Application1 components. All users are licensed for the Microsoft 365 E5 plan. You need to recommend a solution to verify whether the Fabric developers still require permissions to Application1. The solution must meet the following requirements: *To the manager of the developers, send a monthly email message that lists the access permissions to Application1. *If the manager does not verify access permission, automatically revoke that permission. *Minimize development effort. What should you recommend? A. Create an Azure Automation runbook that runs the Get-AzureADUserAppRoleAssignment cmdlet. B. In Azure Active Directory (Azure AD) create an access review of Application1. C. In Azure Active Directory (AD) create a privileged

role for Application1. D. In Azure Active Directory (AD) create a role assignment for Application1. Answer: C **Question: 18** DRAG DROP You need to design an architecture to capture the creation of users and the assignment of roles. The captured data must be stored in Azure Cosmos DB. Which Azure services should you include in the design? To answer, drag the appropriate services to the correct targets. Each service may be used once, more than once, or not at all. You need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 19** DRAG DROP

A company named Contoso, Ltd. has an Azure Active Directory (Azure AD) tenant that uses the Basic license. You plan to deploy two applications to Azure. The application has the requirements shown in the following table. Which authentication strategy should you recommend for each application? To answer, drag the appropriate authentication strategies to the correct applications. Each authentication strategy may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 20** You have an Azure subscription that contains a custom application named Application1. Application1 was developed by an external company named Fabric, Ltd. Developers at Fabric were assigned role-based access control (RBAC) permissions to the Application1 components. All users are licensed for the Microsoft 365 E5 plan. You need to recommend a solution to verify whether the Fabric developers still require permissions to Application1. The solution must meet the following requirements: *To the manager of the developers, send a monthly email message that lists the access permissions to Application1. *If the manager does not verify access permission, automatically revoke that permission. *Minimize development effort. What should you recommend? A. Create an Azure Automation runbook that runs the Get-AzureADUserAppRoleAssignment cmdlet. B. In Azure Active Directory (Azure AD) create an access review of Application1. C. In Azure Active Directory (AD) create a privileged

role for Application1. D. In Azure Active Directory (AD) create a role assignment for Application1. Answer: C **Question: 18** DRAG DROP You need to design an architecture to capture the creation of users and the assignment of roles. The captured data must be stored in Azure Cosmos DB. Which Azure services should you include in the design? To answer, drag the appropriate services to the correct targets. Each service may be used once, more than once, or not at all. You need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 19** DRAG DROP

A company named Contoso, Ltd. has an Azure Active Directory (Azure AD) tenant that uses the Basic license. You plan to deploy two applications to Azure. The application has the requirements shown in the following table. Which authentication strategy should you recommend for each application? To answer, drag the appropriate authentication strategies to the correct applications. Each authentication strategy may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 20** You have an Azure subscription that contains a custom application named Application1. Application1 was developed by an external company named Fabric, Ltd. A company named Contoso, Ltd. has an Azure Active Directory (Azure AD) tenant that uses the Basic license. You plan to deploy two applications to Azure. The application has the requirements shown in the following table. Which authentication strategy should you recommend for each application? To answer, drag the appropriate authentication strategies to the correct applications. Each authentication strategy may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content. NOTE: Each correct selection is worth one point. Answer: **Question: 20** You have an Azure subscription that contains a custom application named Application1. Application1 was developed by an external company named Fabric, Ltd. Developers at Fabric were assigned role-based access control (RBAC) permissions to the Application1 components. All users are licensed for the Microsoft 365 E5 plan. You need to recommend a solution to verify whether the Fabric developers still require permissions to Application1. The solution must meet the following requirements: *To the manager of the developers, send a monthly email message that lists the access permissions to Application1. *If the manager does not verify access permission, automatically revoke that permission. *Minimize development effort. What should you recommend? A. Create an Azure Automation runbook that runs the Get-AzureADUserAppRoleAssignment cmdlet. B. In Azure Active Directory (Azure AD) create an access review of Application1. C. In Azure Active Directory (AD) create a privileged

identity Managed, create a custom roles assignment for the Application 1 resources.D.Create an Azure Automation runbook that runs the get-AzureRaRolesAssigned cmdlet.**Answer: A** **Question: 21** HOTSPOTYou configure OAuth 2 authorization in API Management as shown in the exhibit.Use the drop-domain to select the answer choice that completes each statement based on the information presented in the graphic.NOTE: Each correct selection is worth one point. Answer: Question: 22 You manage a single-domain, on-premises Active Directory for named contoso.com. The forest functional level is window Server 2016.You have several on-premises applications that depend on Active Directory. You plan to migrate the applications to Azure.You need to recommend an identity solution for the appkcatkms. The solution must meet the following requirements:Eliminate the need for hybrid network connectivityMinimize management overhead for Active Directory. What should you recommend?A.In Azure, deploy additional domain controllers for the contoso.com domainB.In Azure, deploy an additional child domain to the contoso.com forest.C.Implement Azure Active Directory Domain Services (Azure AD DS).D.Implement a new Active Directory forest in Azure.
