<https://drive.google.com/drive/folders/0B75b5xYLjSSNN1RSdIN6Z0VwRjg?usp=sharing>New QuestionYou manage a SQL Server Master Data Services (MDS) environment. A new application requires access to the product data that is available in the MDS repository. You need to design a solution that gives the application access to the product data with the least amount of development effort. What should you do?A. Use sp_addlinkedserver to add a linked server to access the MDS database tables directly.B.

Create an OLE DB connection string that sets the Provider property to MDS.C. Use transactional replication for data

synchronization.D. Create a Subscription View in MDS.**Answer: D**New QuestionYou are completing the installation of the Data Quality Server component of SQL Server Data Quality Services (DQS). You need to complete the post-installation configuration.

What should you do?A. Install the Analysis Services OLE DB Provider.B. Make the data available for DQS operations.C. Run the Data Quality Server Installer.D. Install ADOMD.NET.**Answer: C**Explanation:

<http://msdn.microsoft.com/en-us/library/ff877917.aspx><http://msdn.microsoft.com/en-us/library/gg492277.aspx>New Question

You are editing a SQL Server Integration Services (SSIS) package that contains three Execute SQL tasks and no other tasks. The three Execute SQL tasks modify products in staging tables in preparation for a data warehouse load. The package and all three Execute SQL product tasks have their TransactionOption property set to Supported. You need to ensure that if any of the three Execute SQL product tasks fail, all three tasks will roll back their changes. What should you do?A. Change the TransactionOption property of the package to Required.B. Change the TransactionOption property of all three Execute SQL product tasks to Required.C. Move the three Execute SQL product tasks into a Foreach Loop container.D. Move the three Execute SQL product tasks into a Sequence container.**Answer: A**Explanation:**<http://msdn.microsoft.com/en-us/library/ms137690.aspx>**

<http://msdn.microsoft.com/en-us/library/ms141144.aspx>New QuestionYou are developing a SQL Server Integration Services (SSIS) package that imports data into a data warehouse hosted on SQL Azure. The package uses a Foreach container to process text files found in a folder. The package must be deployed to a single server by using the Project Deployment model. Multiple SQL Server Agent jobs call the package. Each job is executed on a different schedule. Each job passes a different folder path to the package. You need to configure the package to accept the folder path from each job. Which package configuration should you use?A. Parent Package VariableB. XML Configuration FileC. Environment VariableD. .dtsConfig fileE. Registry Entry

Answer: CNew QuestionDrag and Drop QuestionYou are developing a SQL Server Integration Services (SSIS) package. The package uses custom functionality that accesses a SQL Server database. The custom functionality must be implemented by using Language Integrated Query (LINQ). You need to ensure that the LINQ code can be debugged at design time. What should you select from the SSIS Toolbox? (To answer, drag the appropriate item to the correct location in the answer area.) **Answer: New Question**

Drag and Drop QuestionsYou are developing a SQL Server Integration Services (SSIS) project by using the Project Deployment model. The project contains many packages. It is deployed on a server named SQLTest1. The project will be deployed to several servers that run SQL Server 2012. The project accepts one required parameter. The data type of the parameter is a string. A SQL Agent job is created that will call the Loading.dtsx package in the project. A job step is created for the SSIS package. The job must pass the value of an SSIS Environment Variable to the project parameter. The value of the Environment Variable must be configured differently on each server that runs SQL Server. The value of the Environment Variable must provide the server name to the project parameter. You need to configure SSIS on the SQLTest1 server to pass the Environment Variable to the package. Which four actions should you perform in sequence by using SQL Server Management Studio? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) **Answer: New Question**

Drag and Drop QuestionsYou are creating a SQL Server Integration Services (SSIS) package that implements a Type 3 Slowly Changing Dimension (SCD). You need to add a task or component to the package that allows you to implement the SCD logic. What should you use?A. a Data Conversion componentB. an Execute SQL task that executes a MERGE statement on the databaseC. a Merge componentD. an Expression task**Answer: C**

Explanation:Note: Type of Slowly Changing Dimensions Slowly Changing Dimensions are categorized into three types named:

Type 1, Type 2, and Type3. The Type 1 SCD does not maintain the history of changing attributes, it overwrites values of the attributes. Type 2 maintains historical values for changing attributes. Type 3 that we do not use much maintains separate columns for changed attributes. SSIS SCD wizard supports both Type 1 and Type 2.Using MERGE instead of SCD wizard Replacement of SCD wizard with MERGE is not a straightforward technique. If the SCD has both Type 1 and Type 2 types attributes, they need to be

handled separately. New Question You are developing a SQL Server Integration Services (SSIS) package to load data into a SQL Server table on Server A. The package includes a data flow and is executed on Server B. The destination table has its own identity column. The destination data load has the following requirements:- The identity values from the source table must be used. - Default constraints on the destination table must be ignored. - Batch size must be 100,000 rows. You need to add a destination and configure it to meet the requirements. Which destination should you use? A. OLE DB Destination with Fast Load B. SQL Server Destination C. ADO NET Destination without Bulk Insert D. ADO NET Destination with Bulk Insert E. OLE DB Destination without Fast Load Answer: A Explanation: <http://msdn.microsoft.com/en-us/library/ms141237.aspx>

<http://msdn.microsoft.com/en-us/library/ms139821.aspx> <http://msdn.microsoft.com/en-us/library/ms141095.aspx> New Question You are developing a SQL Server Integration Services (SSIS) package that imports data into a data warehouse. You add an Execute SQL task to the control flow. The task must execute a simple INSERT statement. The task has the following requirements:- The INSERT statement must use the value of a string package variable. - The variable name is StringVar. - The Execute SQL task must use an OLE DB Connection Manager. In the Parameter Mapping tab of the Execute SQL task, StringVar has been added as the only parameter. You must configure the SQLStatement property of the Execute SQL task. Which SQL statement should you use? A. INSERT INTO dbo.Table (variablevalue) VALUES (@StringVar) B. INSERT INTO dbo.Table (variablevalue) VALUES (\$Project::StringVar) C. INSERT INTO dbo.Table (variablevalue) VALUES (?) D. INSERT INTO dbo.Table (variablevalue) VALUES (\$Package::StringVar) Answer: C

New Question Drag and Drop Question You are editing a SQL Server Integration Services (SSIS) package that uses checkpoints. The package performs the following steps: 1. Download a sales transaction file by using FTP. 2. Truncate a staging table. 3. Load the contents of the file to the staging table. 4. Merge the data with another data source for loading to a data warehouse. The checkpoints are currently working such that if any of the four steps fail, the package will restart from the failed step the next time it executes. You need to modify the package to ensure that if either the Truncate Staging Table or the Load Sales to Staging task fails, the package will always restart from the Truncate Staging Table task the next time the package runs. Which three steps should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Answer: New Question You are designing a SQL Server Integration Services (SSIS) package that uploads a file to a table named Orders in a SQL Azure database. The company's auditing policies have the following requirements:- An entry must be written to a dedicated SQL Server log table named OrderLog. - The entry must be written as soon as the file upload task completes. You need to meet the company's policy requirements. Which event handler should you use? A. OnProgress B. OnInformation C. OnPostExecute D. OnComplete Answer: C !!!RECOMMEND!!! 1. | 2019 Latest 70-767 Exam Dumps (PDF & VCE) Instant Download: <https://www.braindump2go.com/70-767.html> 2. | 2019 Latest 70-767 Study Guide Video Instant Download: YouTube Video: [YouTube.com/watch?v=mw8nr3ufjq4](https://www.youtube.com/watch?v=mw8nr3ufjq4)
