## Braindump2go New Updated Microsoft 70-462 Questions are 100% Same With the Real Microsoft 70-462 Test(31-40)

QUESTION 31You administer a Microsoft SQL Server 2012 database that contains a table named OrderDetail. You discover that the NCI\_OrderDetail\_CustomerID non-clustered index is fragmented. You need to reduce fragmentation. You need to achieve this goal without taking the index offline. Which Transact-SQL batch should you use? A. CREATE INDEX

NCI\_OrderDetail\_CustomerID ON OrderDetail.CustomerID WITH DROP EXISTINGB. ALTER INDEX

NCI\_OrderDetail\_CustomerID ON OrderDetail.CustomerID REORGANIZEC. ALTER INDEX ALL ON OrderDetail REBUILD D. ALTER INDEX NCI OrderDetail CustomerID ON OrderDetail.CustomerID REBUILD Answer: BExplanation:

http://msdn.microsoft.com/en-us/library/ms188388.aspxQUESTION 32You administer a Microsoft SQL Server database named

Sales. The database is 3 terabytes in size. The Sales database is configured as shown in the following table.

e.	Filegroup	
	PRIMARY	•
	Braindum	p2g
	ARCHIVES	:

You discover that all files except Sales\_2.ndf are corrupt. You need to recover the corrupted data in the minimum amount of time. What should you do? A. Perform a restore from a full backup.B. Perform a transaction log restore.C. Perform a file restore.D. Perform a filegroup restore. Answer: CExplanation:<u>http://technet.microsoft.com/en-us/library/ms187048.aspx</u>

http://msdn.microsoft.com/en-us/library/aa337540.aspx</u>Under the simple recovery model, the file must belong to a read-only filegroup. Under the full or bulk-logged recovery model, before you can restore files, you must back up the active transaction log (known as the tail of the log). For more information, see Back Up a Transaction Log (SQL Server).To restore a database that is encrypted, you must have access to the certificate or asymmetric key that was used to encrypt the database. Without the certificate or asymmetric key, the database cannot be restored. As a result, the certificate that is used to encrypt the database encryption key must be retained as long as the backup is needed. For more information, see SQL Server Certificates and Asymmetric Keys. QUESTION 33Drag and Drop QuestionYou administer a Microsoft SQL Server 2012 clustered instance that has two nodes named Node 1 and Node 2. Node 1 fails and the cluster fails over to Node 2. You need to replace Node 1 and add it to the cluster. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange

them in the correct order.)	Evict Node 1 from the Windows Failover Cluster.
	Install Windows on a new server to replace Node 1.
	Run SQL Server Setup to add Node 1 to the failover cluster.
	Run Cluster Administrator Setura to add Node 1 to the failover cluster. Braincium p2go.com
	Add Node 1 to the existing cluster by using SQL Server Configuration Manager.
	Add Node 1 to the existing cluster by using the Windows Failover Cluster Manager.
	Register the secondary instance with the Cluster Manager by using SQL Server Management Studio.

Answer:		Evict Node 1 from the Windows Failover Cluster.
		Install Windows on a new server to replace Node 1.
		Add Node 1 to the existing cluster by using the Windows Failover Cluster Manager.
	Run Cluster Administrator Setup to add Node 1 to the failover cluster.	Run SQL Server Setup to add Node 1 to the failover
	Add Node 1 to the existing cluster by using SQL Server Configuration Manager.	
	Register the secondary instance with the Cluster Manager by using SQL Server Management Studio.	

] QUESTION 34Drag and Drop QuestionYou administer a Microsoft SQL Server 2012 database. The database uses SQL Server

Agent jobs to perform regular FULL and LOG backups. The database uses the FULL recovery model. You plan to perform a bulk import of a very large text file. You need to ensure that the following requirements are met during the bulk operation: The database transaction log is minimally affected. The database is online and all user transactions are recoverable. All transactions are fully recoverable prior to the import. Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.)

Perform a FULL database backup Perform a database LOG breigup. go.com Configure the database to use the BULK-LOGGED

Answer:	Execute the BCP tool.		Perform a database LOG backup.
	Perform a FULL database backup.	0	Configure the database to use the BULK-LOGGED recovery model.
	Perform a database LOG breisup.	na	
	Configure the database to use the FOLL recovery model.	R9	Justichie and helpicool
	Configure the database to use the BULK-LOGGED recovery model.		

] QUESTION 35Drag and Drop QuestionYou administer a Microsoft SQL Server database. You want to import data from a text file to the database. You need to ensure that the following requirements are met:Data import is performed by using a stored procedure. Data is loaded as a unit and is minimally logged. Which data import command and recovery model should you choose? (To answer, drag the appropriate data import command or recovery model to the appropriate location or locations in the answer area. Each data import command or recovery model may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.) Command/Recovery Model Name Command/Recovery Model

QUESTION 36Drag and Drop QuestionYou administer a Microsoft SQL Server 2012 database. The database is backed up according to the following schedule:Daily full backup at 23:00 hours.Differential backups on the hour, except at 23:00 hours. Log backups every 10 minutes from the hour, except on the hour. The database uses the Full recovery model.A developer accidentally drops a number of tables and stored procedures from the database between 22:40 hours and 23:10 hours. You perform a database restore at 23:30 hours to recover the dropped table.You need to restore the database by using the minimum amount of administrative effort. You also need to ensure minimal data loss.Which three actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Restore the most recent full backup.

This page was exported from - <u>New Braindump2go Exam Dumps</u> Export date: Fri Jan 10 15:30:57 2025 / +0000 GMT

Answer:	Restore the most recent full backup.		Restore the full backup taken the previous night.
			Restore the differential backup taken at 22:00 hours.
	Restore the transaction log backup taken at 22:40 hours. Braindum	0	Restore each transaction log backup taken from 22:00 hours till 22:40 hours.
	Restore each transaction log backup taken from the most recent full backup.	122	_go.com
	Restore each differential database backup taken from the previous night's full backup.		
	Restore each transaction log backup taken from the previous night's full backup till 22:40 hours.		

QUESTION 37Drag and Drop QuestionYou administer a Microsoft SQL Server 2012 instance that contains a database of confidential data. You need to encrypt the database files at the page level. You also need to encrypt the transaction log files. Which four actions should you perform in sequence? (To answer, move the appropriate actions from the list of actions to the answer area and arrange them in the correct order.) Create a master key.

er.)	Create a master key.	
	Create a certificate in the user database protected by the master key.	
	Create a certificate in the master database protected by the master key.	
	Create a database encryption key in the user database and protect it by appassyord	np2go.com
	Create a database encryption key in the master database and protect it by a password.	12490.0011
	Create a database encryption key in the user database and protect it by the certificate.	
	Create a database encryption key in the master database and protect it by the certificate.	
	Set the database option to enable encryption.	

Create a certificate in the user database protected by the master key.		Create a master key. Create a certificate in the master database protected by the master key.
Create a database encryption key in the user	C	Create a database encryption key in the user database and protect it by the certificate.
database and protect it by approved. Create a database encryption key in the master database and protect it by a password.	ng	Apet the database option to enable encryption.
Create a database encryption key in the master database and protect it by the certificate.		

QUESTION 38You administer a Microsoft SQL Server 2012 server. You plan to deploy new features to an application. You need to evaluate existing and potential clustered and non-clustered indexes that will improve performance. What should you do? A. Query the sys.dm\_db\_index\_usage\_stats DMV.B. Query the sys.dm\_db\_missing\_index\_details DMV.C. Use the Database Engine Tuning Advisor.D. Query the sys.dm\_db\_missing\_index\_columns DMV. Answer: CExplanation: http://msdn.microsoft.com/en-us/library/ms174202.aspx QUESTION 39You administer a Microsoft SQL Server 2012 database named Contoso on a server named Server01. You need to write messages to the Application Log when users are added to or removed from a fixed server role in Server01. What should you create? A. a Database Audit SpecificationB. a PolicyC. an AlertD. a SQL Profiler TraceE. a Resource PoolF. an Extended Event sessionG. a Server Audit Specification Answer: G QUESTION 40You administer a Microsoft SQL Server 2012 database named Contoso on a server named Server01. What should you create? A. an AlertB. a Server Audit Specification C.

an Extended Event sessionD. a Resource PoolE. a PolicyF. a SQL Profiler TraceG. a Database Audit Specification Answer: A Download Free Braindump2go New Updated Microsoft 70-462 Dumps Full Version, In PDF Format, 189 Questions and Answers in all: http://www.braindump2go.com/70-462.html
