QUESTION 41 You are implementing an ASP.NET MVC 2 application. In the Areas folder, you add a subfolder named Product to create a single project area. You add files named ProductController.cs and Index.aspx to the appropriate subfolders. You then add a file named Route.cs to the Product folder that contains the following code. (Line numbers are included for reference only.)

```
01 public class Routes : AreaRegistration
02 {
03     public override string AreaName
04     {
05         get { return "product"; }
06     }
07
08     public override void RegisterArea(AreaRegistrationContext context)
09     {
10         context.MapRoute("product_default",
11             "product/{controller}/{action}/{id}",
12             new { controller = "Product", action = "Index", id = "" });
13     }
14 }
```

When you load the URL <http://<applicationname>/product>, you discover that the correct page is not returned. You need to ensure that the correct page is returned. What should you do?

A. Replace line 10 with the following code segment.

```
context.MapRoute("product_default",
    "{area}/{controller}/{action}/{id}",
    new { area = "product", controller = "Product", action = "Index", id = "" });
```

B. Replace line 10 with the following code segment.

```
context.MapRoute("product_default", "area}",
```

C. Add the following code segment at line 11.

```
AreaRegistration.RegisterAllAreas();
```

D. Add the following code segment to the Register Routes in Global.asax.cs file.

```
AreaRegistration.RegisterAllAreas();
```

Answer: D

QUESTION 42 You are implementing an ASP.NET MVC 2 Web application. You create a shared user control named MenuBar.ascx that contains the application's menu. You need to use the menu bar in all application views. What should you do?

A. In the site's master page, create a div element with an ID of Navigation. Add the following code segment inside this div element.

```
<% Html.RenderPartial("~/Views/Shared/MenuBar.ascx"); %>
```

B. In the site's master page, create a div element with an ID of Navigation. Add the following code segment inside this div element.

```
<% =
Url.Content("~/Views/Shared/MenuBar.ascx") %>
```

C. In each of the controller's action methods, add an entry to the ViewData collection with a key of Navigation and a value of ~/Views/Shared/MenuBar.ascx.

D. In the site's Global.asax.cs file, register a route named Navigation that points to the ~/Views/Shared/MenuBar.ascx file.

Answer: A

QUESTION 43 You are implementing an ASP.NET MVC 2 Web application that contains several folders. The Views/Shared/DisplayTemplates folder contains a templated helper named Score.ascx that performs custom formatting of integer values. The Models folder contains a class named Player with the following definition.

```
public class Player {
    public String Name { get; set; }
    public int LastScore { get; set; }
    public int HighScore { get; set; }
}
```

You need to ensure that the custom formatting is applied to LastScore values when the HtmlHelper.DisplayForModel

method is called for any view in the application that has a model of type Player. What should you do? A. Rename Score.ascx to LastScore.ascx. B. Move Score.ascx from the Views/Shared/DisplayTemplates folder to the Views/Player/DisplayTemplates folder. C. Add the following attribute to the LastScore property. [UIHint("Score")] D. Add the following attribute to the LastScore property. [Display(Name="LastScore", ShortName="Score")] Answer: C

QUESTION 44 You create an ASP.NET MVC 2 Web application that contains the following controller class. `public class ProductController : Controller { static List<Product> products = new List<Product>(); public ActionResult Index() { return View(); } }` In the Views folder of your application, you add a view page named Index.aspx that includes the following @ Page directive. `<%@ Page Inherits="System.Web.Mvc.ViewPage" %>` You test the application with a browser. You receive the following error message when the Index method is invoked: "The view 'Index' or its master was not found." You need to resolve the error so that the new view is displayed when the Index method is invoked. What should you do? A. Change the name of the Index.aspx file to Product.aspx. B. Create a folder named Product inside the Views folder. Move Index.aspx to the Product folder. C. Replace the @ Page directive in Index.aspx with the following value. `<%@ Page Inherits="System.Web.Mvc.ViewPage<Product>" %>` D. Modify the Index method by changing its signature to the following: `public ActionResult Index(Product p)` Answer: B

QUESTION 45 You are implementing an ASP.NET MVC 2 Web application that contains the following class. `public class DepartmentController : Controller { static List<Department> departments = new List<Department>(); public ActionResult Index() { return View(departments); } public ActionResult Details(int id) { return View(departments.Find(x => x.ID == id)); } public ActionResult ListEmployees(Department d) { List<Employee> employees = GetEmployees(d); return View(employees); } }` You create a strongly typed view that displays details for a Department instance. You want the view to also include a listing of department employees. You need to write a code segment that will call the ListEmployees action method and output the results in place. Which code segment should you use? A. `<%= Html.Action("ListEmployees", Model) %>` B. `<%= Html.ActionLink("ListEmployees", "Department", "DepartmentController") %>` C. `<% Html.RenderPartial("ListEmployees", Model); %>` D. `<%= Html.DisplayForModel("ListEmployees") %>` Answer: A

Explanation: `Html.Action(string, object)` invokes a child action method and returns the result as an HTML string. `ChildActionExtensions.ActionMethod(http://msdn.microsoft.com/en-us/library/system.web.mvc.html.childactionextensions.action.aspx)` `Html.DisplayForModel()` Method returns HTML markup for each property in the model. `Html.DisplayForModel(string, object)` Method returns HTML markup for each property in the model, using the specified template and additional view data. `RenderPartialExtensions.RenderPartialMethod(http://msdn.microsoft.com/en-us/library/system.web.mvc.html.renderpartialextensions.renderpartial.aspx)` The `ActionLink` method renders an element that links to an action method. `LinkExtensions.ActionLinkMethod(http://msdn.microsoft.com/en-us/library/system.web.mvc.html.linkextensions.actionlink.aspx)`

QUESTION 46 You are testing an existing ASP.NET page. The page includes a text box. You are able to execute malicious JavaScript code by typing it in the text box and submitting. You need to configure the page to prevent JavaScript code from being submitted by the text box. In the @ Page directive, which attribute should you set to true? A. the `EnableEventValidation` attribute B. the `ResponseEncoding` attribute C. the `ValidateRequest` attribute D. the `Strict` attribute Answer: C

QUESTION 47 You are implementing an ASP.NET Web site that will be accessed by an international audience. The site contains global and local resources for display elements that must be translated into the language that is selected by the user. You need to ensure that the Label control named `lblCompany` displays text in the user's selected language from the global resource file. Which control markup should you use? A. `<asp:Label ID="lblCompany" runat="server" meta:resourcekey="lblCompany" />` B. `<asp:Label ID="lblCompany" runat="server" Text="meta:lblCompany.Text" />` C. `<asp:Label ID="lblCompany" runat="server" Text="<%= $Resources:lblCompanyText %>" />` D. `<asp:Label ID="lblCompany" runat="server" Text="<%= $Resources:WebResources, lblCompanyText %>" />` Answer: D

QUESTION 48 You are implementing an ASP.NET page in an e-commerce application. Code in a `btnAddToCart_Click` event handler adds a product to the shopping cart. The page should check the status of the shopping cart and always show a cart icon when one or more items are in the shopping cart. The page should hide the icon when the shopping cart has no items. You need to add an event handler to implement this requirement. Which event handler should you add? A. `btnAddToCart_Click` B. `Page_Load` C. `Page_PreRender` D. `Page_PreInit` Answer: C

QUESTION 49 You are implementing a read-only page that includes the following controls. `<asp:Button ID="btnRefresh" runat="server" Text="Button" />` `<asp:GridView ID="gvCustomers" runat="server" EnableViewState="False" OnDataBinding="gvCustomers_DataBinding">` `</asp:GridView>` You disable view state to improve performance. You need to ensure that the page is updated to display the latest data when the user clicks the refresh button. Which code segment should you use? A. `protected void Page_PreInit(object sender, EventArgs e) { if (!IsPostBack) { gvCustomers.DataSource = GetCustomers(); gvCustomers.DataBind(); } }` B. `protected void Page_Load(object sender, EventArgs e) { gvCustomers.DataSource = GetCustomers(); gvCustomers.DataBind(); }` C. `protected void gvCustomers_DataBinding(object sender, EventArgs e) { gvCustomers.DataSource = GetCustomers(); gvCustomers.DataBind(); }` D. `protected void`

Page_PreRender(object sender, EventArgs e){if (!IsPostBack){gvCustomers.DataSource = GetCustomers();
gvCustomers.DataBind();}} Answer: B QUESTION 50You create an ASP.NET page named TestPage.aspx that contains validation
controls.You need to verify that all input values submitted by the user have been validated by testing the Page.IsValid property.
Which page event should add an event handler to? A. InitB. LoadC. PreInitD. PreLoad Answer: B Braindump2go New
