<https://drive.google.com/drive/folders/1ifSXRUVi3y9XBrpRaRBUfubgdkFJ0E2n?usp=sharing>**New Question**You are creating an IoT solution using Azure Time Series Insights. You configure the environment to ensure that all data for the current year is available. What should you do?
A. Add a disaster recovery (DR) strategy.
B. Set a value for the Data retention time setting.
C. Change the pricing tier.
D. Create a reference data set.
Answer: D**New Question****HOTSPOT**You have a task that includes a WebJob that should run continuously. The WebJob Log exhibit shows the text that is displayed when the WebJob runs. (Click the WebJob Log tab.) The WebJob is configured as shown in the WebJob Configuration exhibit. (Click the WebJob Configuration tab.) The WebJob is not functioning as expected. The WebJob Code exhibit has a comment that shows where code should be added. (Click the WebJob Code tab.) You need to identify any issues with the WebJob. For each of the following statements, select Yes if the statement is true. Otherwise, select No.
NOTE: Each correct selection is worth one point.
Answer: **New Question**You have an Azure App Service API that allows users to upload documents to the cloud with a mobile device. A mobile app connects to the service by using REST API calls. When a new document is uploaded to the service, the service extracts the document metadata. Usage statistics for the app show significant increases in app usage. The extraction process is CPU-intensive. You plan to modify the API to use a queue. You need to ensure that the solution scales, handles request spikes, and reduces costs between request spikes. What should you do?
A. Configure a CPU Optimized virtual machine (VM) and install the Web App service on the new instance.
B. Configure a series of CPU Optimized virtual machine (VM) instances and install extraction logic to process a queue.
C. Move the extraction logic into an Azure Function. Create a queue triggered function to process the queue.
D. Configure Azure Container Service to retrieve items from a queue and run across a pool of virtual machine (VM) nodes using the extraction logic.
Answer: C**New Question****DRAG DROP**Fourth Coffee has an ASP.NET Core web app that runs in Docker. The app is mapped to the `www.fourthcoffee.com` domain. Fourth Coffee is migrating this application to Azure. You need to provision an App Service Web App to host this docker image and map the custom domain to the App Service web app. A resource group named `FourthCoffeePublicWebResourceGroup` has been created in the WestUS region that contains an App Service Plan named `AppServiceLinuxDockerPlan`. Which order should the CLI commands be used to develop the solution? To answer, move all of the Azure CLI commands from the list of commands to the answer area and arrange them in the correct order.
Answer: **New Question**You create a social media application that users can use to upload images and other content. Users report that adult content is being posted in an area of the site that is accessible to and intended for young children. You need to automatically detect and flag potentially offensive content. The solution must not require any custom coding other than code to scan and evaluate images. What should you implement?
A. Bing Visual Search
B. Bing Image Search
C. Custom Vision Search
D. Computer Vision API
Answer: D **New Question****DRAG DROP**You plan to create a Docker image that runs an ASP.NET Core application named `ContosoApp`. You have a setup script named `setupScript.ps1` and a series of application files including `ContosoApp.dll`. You need to create a Dockerfile document that meets the following requirements:
Call `setupScript.ps1` when the container is built.
Run `ContosoApp.dll` when the container starts.
The Dockerfile document must be created in the same folder where `ContosoApp.dll` and `setupScript.ps1` are stored.
Which four commands should you use to develop the solution? To answer, move the appropriate commands from the list of commands to the answer area and arrange them in the correct order.
Answer: **New Question**You download an Azure Resource Manager template based on an existing virtual machine. The template will be used to deploy 100 virtual machines. You need to modify the template to reference an administrative password. You must prevent the password from being stored in plain text. What should you create to store the password?
A. an Azure Key Vault and an access policy.
B. an Azure Storage account and an access policy.
C. Azure Active Directory (AD) Identity Protection and an Azure policy.
D. a Recovery Services vault and a backup policy.
Answer: A **New Question**You are the global administrator for an Azure Active Directory (Azure AD) tenant named `adatum.com`. You need to enable two-step verification for Azure users. What should you do?
A. Create an Azure AD conditional access policy.
B. Configure a playbook in Azure Security Center.
C. Enable Azure AD Privileged Identity Management.
D. Install an MFA Server.
Answer: D **New Question****HOTSPOT**You are developing an Azure Function that will be triggered using a webhook from an external application. The Azure Function will receive JSON data in the body of the request. Calling applications send an account ID as part of the URL. The number at the end of the URL is an integer. The format for the URL resembles the following: `/api/account/1` The Azure Function must accept all incoming requests without requiring keys or tokens. You need to complete the attributes for the

Azure Function. How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. Answer: New Question HOTSPOT You are developing a workflow solution using Azure technologies. What should you implement to meet each requirement? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point. Answer: New Question HOTSPOT You are developing a SMS-based testing solution. The solution sends users a question by using SMS. Early responders may qualify for prizes. Users must respond with an answer choice within 90 seconds. You must be able to track how long it takes each user to respond. You create a durable Azure Function named SendSmsQuizQuestion that uses Twilio to send messages. You need to write the code for MessageQuiz. How should you complete the code? To answer, select the appropriate options in the answer area. NOTE: Each correct selection is worth one point.
