

## [May-2018-New100% Real 70-695 Dumps PDF 105Q-Braindump2go[60-70

2018 May New Microsoft 70-695 Exam Dumps with PDF and VCE Just Updated Today! Following are some new 70-695 Real Exam Questions:

- QUESTION 60**You have a server named Server1 that runs Windows Server 2012 R2. You install the Windows Assessment and Deployment Kit (Windows ADK) and the Microsoft Deployment Toolkit (MDT) 2013 on Server1. You need to create a standard client task sequence from the Deployment Workbench. What should you do first?  
A. Configure a deployment share.  
B. Add an operating system.  
C. Create a Customsettings.ini file.  
D. Import an operating system package.  
**Answer: A**  
**Explanation:**<https://technet.microsoft.com/en-us/library/dn781086.aspx>
- QUESTION 61**You have a Windows Deployment Services (WDS) server named Server1. You plan to deploy an image of Windows 8.1 Enterprise to 50 new client computers. You need to create a multicast deployment of an image of Windows 8.1 Enterprise. The solution must ensure that the deployment of Windows 8.1 Enterprise immediately starts on each client computer once the computer discovers the WDS server. Which command should you run?  
A. WDSUtil.exe /Start-MulticastTransmission /Image:"Win8.1-Enterprise" /ImageType:Boot /Architecture:x64  
B. WDSUtil.exe /New-MulticastTransmission /FriendlyName:"Multicast" /Image:"Win8.1-Enterprise" /ImageType:Boot /TransmissionType:AutoCast /Architecture:x64  
C. WDSUtil.exe /Start-MulticastTransmission /Image:"Win8.1-Enterprise" /ImageType:Install /Architecture:x64  
D. WDSUtil.exe /New-MulticastTransmission /FriendlyName:"Multicast" /Image:"Win8.1-Enterprise" /ImageType:Install /TransmissionType:AutoCast /Architecture:x64  
**Answer: D**  
**Explanation:**<https://technet.microsoft.com/en-us/library/cc794874.aspx>
- QUESTION 62**Your network contains one Active Directory forest named contoso.com. The forest has a deployment of Microsoft System Center 2012 R2 Configuration Manager. You plan to add a server named Server1 as a distribution point. Server1 will be used only by client computers on the internal network that run Windows 8.1 Enterprise. The Windows Deployment Services server role will NOT be installed on Server1. You need to identify which firewall port on Server1 must be open to ensure that Configuration Manager clients can download application packages from Server1. Which TCP port should you identify?  
A. 139  
B. 80  
C. 1433  
D. 8080  
**Answer: B**  
**Explanation:**<https://technet.microsoft.com/en-gb/library/hh427328.aspx>
- QUESTION 63**You have a Windows Server Update Services (WSUS) server named WSUS1. You deploy Microsoft System Center 2012 R2 Configuration Manager to a server named Server1. You add an operating system image of Windows 8.1 Enterprise named Image1 to Configuration Manager. You need to maintain Image1 so that when deployed, the image always contains the most recent Windows updates. What should you do first?  
A. Create a configuration baseline.  
B. Specify WSUS1 as the intranet Microsoft update service location by using a Group Policy object (GPO).  
C. Install the software update point site system role on WSUS1.  
D. Install the distribution point site system role on Server1.  
**Answer: C**  
**Explanation:**<https://technet.microsoft.com/en-us/library/gg712312.aspx>
- QUESTION 64**You have a deployment of Microsoft System Center 2012 R2 Configuration Manager. The deployment contains the computers shown in the following table. Configuration Manager is used to deploy operating system images and Windows updates. Configuration Manager is integrated with the Microsoft Deployment Toolkit (MDT). You install the Configuration Manager console on Computer1. You need to ensure that you can perform all of the management tasks for the deployment of Configuration Manager from Computer1. Which two actions should you perform on Computer1? Each correct answer presents part of the solution.  
A. Run the Configure ConfigMgr Integration tool.  
B. Install the Windows Assessment and Deployment Kit (Windows ADK) for Windows 8.1.  
C. Install the WSUS administration console.  
D. Install MDT 2013.  
E. Run the New Deployment Share Wizard.  
**Answer: AD**
- QUESTION 65**Your company has a main office and 10 branch offices. You have a deployment of Microsoft System Center 2012 R2 Configuration Manager at the main office that is used to deploy applications to internal users. The applications include Microsoft Office 365 ProPlus. Users in the sales department have laptops that run a corporate image of Windows 8.1 Enterprise. The Configuration Manager client is installed on each user's computer. The sales department users typically work remotely from customer sites, which are located in different cities around the world. You need to recommend a solution to deploy the applications to the sales department users. What is the best recommendation to achieve the goal? More than one answer choice may achieve the goal. Select the BEST answer.  
A. a VPN profile  
B. a boundary group  
C. a cloud distribution point  
D. a remote connection profile  
**Answer: C**  
**Explanation:**<https://technet.microsoft.com/en-gb/library/gg712321.aspx>
- QUESTION 66**Hotspot Question You have a deployment of Microsoft System Center 2012 R2 Configuration Manager that is integrated with the Microsoft Deployment Toolkit (MDT) 2013. You plan to replace an existing client computer that runs Windows 7 with a new computer and to install Windows 8.1 Enterprise on the new computer. The user data stored on the Windows 7 computer must be copied to the new computer. You need to identify how many objects must be created from the Configuration Manager console to automate the replacement of the Windows 7 computer. The solution must minimize administrative effort. How many objects of each type should you identify? To answer, select the appropriate number of objects of each type in the answer area. **Answer:**
- QUESTION 67**Hotspot Question Your company has a main

office and a branch office. The main office is located in Montreal. The branch office is located in Seattle. The offices connect to each other by using a WAN link. The WAN link is congested during business hours. Each office has a high-bandwidth connection to the Internet. The network contains one Active Directory domain named contoso.com. The relevant servers in the domain are configured as shown in the following table. You need to use Server2 to perform an operating system deployment. The solution must minimize the amount of bandwidth used on the WAN link during business hours. What should you do? To answer, select the appropriate options in the answer area. Answer: QUESTION 68 Hotspot Question You create the following configuration file that will be used to migrate content by using the User State Migration Tool (USMT): Use the drop-down menus to select the answer choice that completes each statement. Answer: Explanation: [https://technet.microsoft.com/en-us/library/cc722303\(v=ws.10\).aspx](https://technet.microsoft.com/en-us/library/cc722303(v=ws.10).aspx)

QUESTION 69 You plan to deploy Windows 8.1 Enterprise to new client computers. You have a Microsoft System Center 2012 R2 Configuration Manager site that is configured to deploy operating system images to computers. Currently, any user can install any image. You need to ensure that images can be downloaded by authorized users only. What should you modify? A. the security scope of the boot images B. the properties of the boot images C. the properties of the distribution points D. the security scope of the install images Answer: D Explanation: [https://technet.microsoft.com/en-us/library/cc732961\(v=ws.10\).aspx#BKMK\\_4](https://technet.microsoft.com/en-us/library/cc732961(v=ws.10).aspx#BKMK_4)

QUESTION 70 Your network contains one Active Directory forest named contoso.com. You plan to deploy Windows 8.1 Enterprise to all client computers. As part of the deployment, the operating system volumes of the client computers will be encrypted by using BitLocker Drive Encryption (BitLocker). You need to ensure that when Windows 8.1 Enterprise is deployed, each operating system volume can be encrypted only when the recovery key information is backed up successfully to Active Directory. Which Group Policy setting should you configure? A. Store BitLocker recovery information in Active Directory Domain Services (Windows Server 2008 and Windows Vista) B. Choose default folder for recovery password C. Configure TPM platform validation profile (Windows Vista, Windows Server 2008, Windows 7, Windows Server 2008 R2) D. Choose how BitLocker-protected operating system drives can be recovered. Answer: D Explanation: [https://technet.microsoft.com/en-gb/library/ee424303\(v=ws.10\).aspx](https://technet.microsoft.com/en-gb/library/ee424303(v=ws.10).aspx)
