Each question in the series contains a unique solution that might meet the stated goals. Some questions sets might have more than one correct solutions, while others might not have a correct solution.After you answer a question in this section, you will NOT be able to return to it. As a result, these questions will not appear in the review screen.Your network contains an Active Directory forest named contoso.com.The forest has three sites located in London, Paris and Berlin.The London site contains a web server named Web1 that runs Windows Server 2016.You need to configure Web1 as an HTTP content server for the hosted cache servers located in the Paris and Berlin sites.Solution: You install the BranchCache feature, and then you start the BranchCache service.Does this meet the goal?A. YesB. NoAnswer: AQUESTION 93Note: This question is part of a series of questions that use the same or similar answer choices. An answer choice may be correct for more than one question in the series. Each question is independent of the other questions in this series. Information and details provided in a question apply only to that question.Your network contains Windows and non-Windows devices.You have a DHCP server named Server1 that has an IPv4 scope named Scope1.You need to prevent a client computer that uses the same name as an existing registration from updating the registration.What should you do?A. From the properties of Scope1, modify the Conflict detection attempts setting.B. From the properties of Scope1, configure Name Protection.C. From the properties of IPv4, configure the bindings.D. From IPv4, create a new filter.E. From the properties of Scope1, create an exclusion range.F. From IPv4 run the DHCP Policy Configuration Wizard.G. From Control Panel, modify the properties of Ethernet.H. From Scope1, create a reservation.Answer: BExplanation:The correct answer to this question is B, configure name protection.

Answer: QUESTION 96Hotspot QuestionYou have a virtual machine named VM1 that runs Windows Server 2016. VM1 is a Remote Desktop Services (RDS) server. You need to ensure that only TCP port 3389 can be used to connect to VM1 over the network. Which command should you run on the Hyper-V host? To answer, select the appropriate options in the answer area. Answer: Explanation:

<https://technet.microsoft.com/en-us/library/dn464289.aspx>QUESTION 97Hotspot QuestionYour network contains an Active Directory domain named contoso.com. The domain contains a domain-based Distributed File System (DFS) namespace named Namespace1. You need to view the shares to which users will be redirected when the users attempt to connect to a folder named Folder1 in the DFS namespace. What cmdlet should you run? To answer, select the appropriate options in the answer area. Answer: QUESTION 98Hotspot QuestionYou have a DNS server named Server1. The forwarders are configured as shown in the Forwarders exhibit. (Click the Exhibit button.) The Advanced Settings are configured as shown in the Advanced exhibit. (Click the Exhibit button.) The Root Hints are configured as shown in the Root Hints exhibit. (Click the Exhibit button.) Server1 does not contain any DNS zones. For each of the following statements, select Yes if the statement is true. Otherwise, select No. Answer: Explanation: Recursion is disabled so internet hosts cannot be resolved. The recursive test fails because recursion is disabled. Server1 is not configured as a root server. The forwarders list would be greyed out if it was. QUESTION 99Hotspot QuestionYour network contains an Active Directory forest named contoso.com. The forest has three sites named Site1, Site2 and Site3. Distributed File System (DFS) for the forest is configured as shown in the exhibit. The forest contains a server named Server2 that hosts the DFS namespace. \Contoso.com\Namespace1\Folder2 has the following configuration. \Contoso\Namespace1\Folder2 has the targets configured as shown in the following table. For each of the following statement, Select Yes if Statement is true. Otherwise, select No. Answer: QUESTION 100Hotspot QuestionYou have a Hyper-V host named Server1 that runs Windows Server 2016. Server 1 has a virtual switch Switch1. Server1 hosts the virtual machines configured as shown in the following table. Windows firewall on VM1 and VM2 is configured to allow ICMP traffic. VM1 and VM2 connect to Switch1. You fail to ping VM1 from VM2. You need to view the VirtualSubnetid to which VM1 connects. Which cmdlet should you run on Server1. Answer: Explanation:

Get-VMNetworkAdapter-VMName VM1 | forest-list
QUESTION 101 Hotspot Question Scenario: You are a network administrator for a company named Contoso, Ltd. The network is configured as shown in the exhibit. You install the Remote Access server role on Server2. Server2 has the following configured:
* Network address translation (NAT)
* The DHCP Server server role
The Security Policy of Contoso states that only TCP ports 80 and 443 are allowed from the internet to server2. You identify the following requirements:
* Add 28 devices to subnet2 for a temporary project.
* Configure Server2 to accept VPN connections from the internet.
* Ensure that devices on Subnet2 obtain TCP/IP settings from DHCP on Server2.
End of Scenario: You need to identify which subnet mask you must use for subnet2. The solution must minimize the number of available IP addresses on Subnet2. What subnet mask should you identify? To answer, select the appropriate options in the answer area.
Answer: Explanation: The question specifies that the solution must minimize the number of available IP addresses so the correct answer is 255.255.255.224 which allows for 32 hosts.
QUESTION 102 Hotspot Question You have a DirectAccess Server that is accessible by using the name directaccess.fabrikam.com. On the DirectAccess server, you install a new server certificate that has a subject name of directaccess.contoso.com, and then you configure DNS records for directaccess.contoso.com. You need to change the endpoint name for DirectAccess to directaccess.contoso.com. What command should you run? To answer, select the appropriate options in the answer area.
Answer: Explanation: Set-DaClient-ComputerName directaccess.contoso.com
