

Microsoft 70-687 Practice Questions Free Download From Braindump2go(221-230)

QUESTION 221You administer Windows 8.1 Pro computers in your company network. All computers are members of an Active Directory Domain Services (AD DS) domain.A server named Server1 runs Windows Server 2012 and has an IP address of 10.10.10.20. Server1 is configured to use port 10987 for Remote Desktop connections.From your Windows 8.1 computer, you need to create a Remote Desktop connection to Server1.What should you do? A. From the General tab of your Remote Desktop connection, enter 10.10.10.20 port:10987.B. Create a new Remote Desktop connection, and then set the Local Computer policy to Disable drives redirection for Remote Desktop Services.C. From the Advanced tab of your Remote Desktop connection, configure the port of Server1 in the server authentication field.D. Run mstsc.exe /v:10.10.10.20:10987. Answer: D

QUESTION 222Drag and Drop QuestionA company has 100 client computers.The company plans to deploy Windows 8.1 to the client computers and utilize the following features:- Microsoft Hyper-V 3.0- Snap- Secure bootYou need to establish whether the current hardware supports the features.What hardware is required to enable each of the features? (To answer, drag the appropriate hardware requirements to the correct location or locations in the answer area. Requirements may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Feature	Hardware requirement
Hyper-V 3.0	Hardware Requirement
Snap	Hardware Requirement
Secure boot	Hardware Requirement

DirectX 10
32-bit hardware
Trusted Platform Module (TPM) 1.2
Second-Level Address Translation (SLAT)
Minimum screen resolution of 1366 x 768
Unified Extensible Firmware Interface (UEFI) drivers

Answer:

Feature	Hardware requirement
Hyper-V 3.0	Second-Level Address Translation (SLAT)
Snap	Minimum screen resolution of 1366 x 768
Secure boot	Unified Extensible Firmware Interface (UEFI) drivers

QUESTION 223Drag and Drop QuestionYou administer Windows 8.1 client computers in your company network. A computer has a simple (no resiliency) storage space configured. The storage space is assigned to drive letter E.You plug an eSATA drive into the computer and extend the storage space.You need to unplug the eSATA drive without deleting existing data from the storage space. Which three actions should you perform in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Actions	Answer Area
Open Storage Spaces.	
Select the Change action task.	
Select the Shrink the volume action task.	
Expand the Storage spaces group.	
Open Disk Management.	
Select drive E.	
Expand the Physical devices group.	
Select the Remove action task.	

Answer:

Actions	Answer Area
Open Storage Spaces.	Open Storage Spaces.
Select the Change action task.	
Select the Shrink the volume action task.	
Expand the Storage spaces group.	Expand the Physical devices group.
Open Disk Management.	
Select drive E.	
Expand the Physical devices group.	
Select the Remove action task.	Select the Remove action task.

QUESTION 224Drag and Drop QuestionYou manage Windows 8.1 client computers.You have the following client computer update requirements:Ensure that all client computers check for updates twice a day. Install all critical and available updates,

including updates that require a restart, each day. Restart client computers at 11:00 P.M. if required. Distribute all updates from a Windows Server Update Services (WSUS) server on the local network. You need to deploy Group Policy settings to the client computers to meet the update requirements. Which Group Policy settings should you enable and configure? (To answer, drag the appropriate Group Policy settings to the correct location or locations in the answer area. Group Policy settings may be used once, more than once, or not at all. You may need to drag the split bar between panes or scroll to view content.)

Answer:

Requirement	Group Policy setting
Ensure that all client computers check for updates twice a day	Automatic Updates detection frequency
Install all critical and available updates (including updates that require a restart, each day)	Configure Automatic Updates
Restart client computers at 11:00 P.M. if required	Automatic Maintenance Activation Boundary
Distribute all updates from a WSUS server on the local network	Specify intranet Microsoft update service location

] QUESTION 225A portable computer that runs Windows 8 uses a mobile broadband connection for the corporate wireless network. The computer also has a wired corporate network connection. The computer successfully downloads Windows updates when connected to either network. You need to ensure that the computer automatically downloads updates by using Windows Update while also connected to the wireless corporate network connection. What should you do? A. Set the corporate wireless network to metered. B. Set the corporate wireless network to non-metered. C. Configure the Specify intranet Microsoft update service location local Group Policy setting. D. Configure a Windows Firewall connection security rule. Answer: B Explanation: Setting a Wireless network to METERED allows only critical Windows Updates using that connection. Setting a Wireless network to NON-METERED allows all Windows Updates using that connection. Source:

company has an Active Directory Domain Services (AD DS) domain. All client computers run Windows 8.1 and are joined to the domain. All client computers are shared. Employees can log on to any client computer by using individual accounts. The company implements a new security policy. You have the following requirements:- Ensure that each employee can log on to all computers by using his or her account.- Ensure that employees can reset their credentials from any client computer. You need to choose authentication methods that meet the requirements. Which two authentication methods meet the requirements? (Each correct answer presents a complete solution. Choose two.) A. Active Directory user account B. Local user account C. Microsoft account D. Pin E. Picture password Answer: AC

QUESTION 227A company has Windows 8.1 client computers. A user stores files in multiple locations. You need to determine which of the locations will be included in File History. Which three of the following file locations are included in File History? (Each correct answer presents part of the solution. Choose three.) A. %appdata% B. Public Documents and Public Pictures C. My Documents and My Pictures D. Contacts, Desktop, and Favorites E. C:\Program Files F. All user profile folders Answer: ABD

QUESTION 228 You use a Windows 8.1 tablet. The tablet receives Windows Update updates automatically from the Internet. The tablet has Wi-Fi and is connected to a 3G mobile broadband Wi-Fi hot spot. You need to minimize data usage while connected to this hot spot. What should you do? A. Edit the Inbound Rule of Windows Firewall, and then disable Internet Control Message Protocol (ICMP) traffic. B. Configure the broadband connection as a metered network. C. Configure the interface metric of IP settings for Wi-Fi connection as 1. D. Turn on Airplane Mode. E. Disable File and Print Sharing for mobile broadband connections. Answer: B

QUESTION 229A company has Windows 8.1 client computers. You are designing a remote management solution. IIS is installed on some remote computers and configured to use port 80 and port 443. You

have the following requirements:- Ensure that you can perform most of the same tasks through the remote management solution that you can while working directly on the remote computer. - Ensure that the solution can operate on port 80 and on port 443. You need to choose the remote management tool to meet the requirements. Which remote management tool should you choose? A. Windows Remote Shell (WinRS) B. Remote Desktop Connection (RDC) C. Network Shell (netsh) D. Windows Management Instrumentation (WMI) Answer: A QUESTION 230 You add three hard drives to a Windows 8.1 computer. The computer has a RAID controller. You plan to store data only on the three new hard drives. You need to ensure that data loss will not occur if only one hard drive fails. What should you do? A. Create a storage pool that contains all drives and set the resiliency type to Parity. B. Create a storage pool that contains one drive, and then add the other two drives drive to the pool. C. Create a spanned volume. D. Create a storage pool that contains all drives and set the resiliency type to Two-way mirror. Answer: A Download Free Microsoft 70-687 Exam Questions and Answers from Braindump2go: <http://www.braindump2go.com/70-687.html>
