QUESTION 316You are conducting a site survey for a customer that is about to deploy Cisco wireless phones.Which three recommendations apply? (Choose three.) A. Minimum SNR should be 15 dB.B. The minimum recommended wireless signal strength for voice applications is -71 dBm.C. Minimum SNR should be 25 dB.D. Wireless cell overlap should be 20 percent.E. Minimum SNR should be 35 dB.F. The minimum recommended wireless signal strength for voice applications is -57 dBm.G. Wireless cell overlap should be 10 percent.H. The minimum recommended wireless signal strength for voice applications is -67 dBm. Answer: ADF QUESTION 317You are implementing a WLC at a remote site and want to make sure that you are able to sync up with the Cisco WCS at the central site. Which two statements about this process are true? (Choose two.) A. If the WLC is behind a firewall, you must make sure that UDP ports 161 and 162 are open.B. The Cisco WCS server does not need direct IP connectivity to the WLC.C. Cisco WCS will not be able to communicate with the WLC if the WLC is behind a NAT device.D. If the WLC is behind a NAT device, the WLC's dynamic AP-manager interface must be configured with the external NAT IP address. Answer: ACEExplanation:

<http://www.cisco.com/c/en/us/support/docs/wireless/wireless-control-system/72782-Troubleshoot-WCS-FAQ.html> QUESTION 318

Which two options are valid mobility roles in which a controller can operate in during a client mobility session? (Choose two.) A. localB. auto anchorC. export anchorD. mobility announcer Answer: ACEExplanation:

<http://what-when-how.com/deploying-and-troubleshooting-cisco-wireless-lan-controllers/mobility-messaging-cisco-wireless-lan-controllers-part-1/> QUESTION 319Refer to the exhibit. Which WLAN IDs will be advertised by an out-of-the-box AP that joins the WLC for the first time?

```
(Cisco Controller) >show wlan summary
```

Number of WLANs	WLAN ID	WLAN Profile Name / SSID	Status	Interface Name
5	Hidden	Hidden	Enabled	Vlan5
8	Guest / Guest	Guest / Guest	Enabled	Vlan8
12	Contractors/Contractors	Contractors/Contractors	Disabled	Vlan12
15	IT / IT	IT / IT	Enabled	Vlan15
17	Finance / Finance	Finance / Finance	Enabled	Vlan17
512	Marketing / Marketing	Marketing / Marketing	Enabled	Vlan512

A. 5,8,12,15B. 5,8,15C. 8,15D. 17,512E. 8,15,17,512F. 5,8,15,17,512 Answer: F QUESTION 320Which statement about ACLs used on a Cisco WLC is true? A. A WLAN ACL will override an interface access-list.B. An interface ACL will override a WLAN ACL.C. A WLAN ACL will get applied first followed by an interface ACL.D. An interface ACL will get applied first followed by a WLAN ACL. Answer: AExplanation:<http://mrncciew.com/2013/03/15/wlc-access-control-list-acl/>

QUESTION 321You need to open the appropriate firewall port for RLDP. Which port must you open? A. UDP 6352B. UDP 5246C. TCP 37540D. TCP 8443E. TCP 16113F. UDP 16666 Answer: AExplanation:Rogue Location Discovery Protocol (RLDP) is an active approach, which is used when rogue AP has no authentication (Open Authentication) configured. This mode, which is disabled by default, instructs an active AP to move to the rogue channel and connect to the rogue as a client. During this time, the active AP sends de-authentication messages to all connected clients and then shuts down the radio interface. Then, it associates to the rogue AP as a client. The AP then tries to obtain an IP address from the rogue AP and forwards a User Datagram

Protocol (UDP) packet (port 6352) that contains the local AP and rogue connection information to the controller through the rogue AP. If the controller receives this packet, the alarm is set to notify the network administrator that a rogue AP was discovered on the wired network with the RLDP feature. QUESTION 322 Drag and Drop Question Drag and drop the rogue detection "technique" on the left to the appropriate description on the right.

RLDP	The AP scans all configured channels every 12 seconds. Only deauthentication packets are sent in the air with an AP configured this way. The AP can detect rogues, but it cannot connect to a suspicious rogue as a client
Rogue Detector	An active AP moves to the rogue channel and connects to the rogue as a client. The process of trying to validate that there is a network attached rogue could be service interrupting depending on your AP layout
Monitor Mode	The AP radio is turned off, and the AP listens to wired traffic only. The AP listens for ARP packets in order to determine the layer 2 addresses of identified rogue clients or rogue AP's sent by the controller.

Answer:

	Monitor Mode
	Rogue Detector
	RLDP

QUESTION 323 What are the three fundamental properties that are provided by the antenna of an AP? (Choose three.) A. frequency B. gain C. dB loss D. polarization E. direction F. modulation Answer: BDF Explanation: An antenna gives the wireless system three fundamental properties: gain, direction and polarization. Gain is a measure of increase in power. Gain is the amount of increase in energy that an antenna adds to a radio frequency (RF) signal. Direction is the shape of the transmission pattern. As the gain of a directional antenna increases, the angle of radiation usually decreases. This provides a greater coverage distance, but with a reduced coverage angle. The coverage area or radiation pattern is measured in degrees. These angles are measured in degrees and are called beamwidths. QUESTION 324 Refer to the exhibit. A wireless engineer at ACME Company is troubleshooting a wireless client that is unable to associate to a WLAN. What is likely the cause of the problem?

A. The AP CAPWAP tunnel is down, and is unable to handle any new connections. B. The client is providing a wrong credential for dot1x authentication. C. The WPA PSKs do not match. D. The client uses WPA, but the AP is advertising only WPA2 support. E. A firewall is blocking the ports that are necessary for the AP to join the WLC. Answer: B QUESTION 325 Why would you enable the RFC 3578 option when adding a new RADIUS authentication server to a WLC? A. you want to run both RADIUS and TACACS. B. to support Disconnect and Change of Authorization C. to encrypt communications between the WLC and the RADIUS server D. to support RADIUS key wrapping Answer: B Explanation: If you are configuring a new RADIUS authentication server, choose Enabled from the Support for RFC 3576 drop-down list to enable RFC 3576, which is an extension to the RADIUS protocol that allows dynamic changes to a user session, or choose Disabled to disable this feature. The default value is Enabled. RFC 3576 includes support for disconnecting users and changing authorizations applicable to a user session and supports disconnect and change-of-authorization (CoA) messages. Disconnect messages cause a user session to be terminated immediately where CoA

messages modify session authorization attributes such as data filters. QUESTION 326 Which two statements are true with regards to RRM? (Choose two.) A. RRM neighbor messages are sent at the lowest mandatory speed. B. RRM neighbor messages are sent on channel 1. C. RRM neighbor messages are sent at minimum power. D. RRM neighbor messages are sent over the air. E. RRM neighbor messages are sent every 120 sec by default. Answer: BDE Explanation:

<http://www.cisco.com/c/en/us/support/docs/wireless-mobility/wireless-lan-wlan/71113-rrm-new.html> QUESTION 327 Refer to the exhibit. Which two statements about this output are true? (Choose two.)

```
R1(config)# class-map match-any class1
R1(config-cmap)# match access-group 101
R1(config-cmap)# match protocol ip

R1(config-cmap)# exit
R1(config)# class-map class2
R1(config-cmap)# match access-group 102
R1(config-cmap)# match not protocol ip
R1(config-cmap)# exit
```

A. Unclassified traffic belongs to the traffic class default, and packets in this class are treated as FIFO. B. For traffic to match class1, the traffic that is being evaluated must match one of the specified criteria. C. For traffic to match class1, the traffic that is being evaluated must match both of the specified criteria. D. Unclassified traffic will be dropped because no default class is created. Answer: B
