DragAction.Drop Answer: D QUESTION 86 You are developing a Windows Presentation Foundation (WPF) application. This application will be deployed to 20 countries. However, it will only be localized to some of those countries' regional dialects. The localization will be performed by using resource files. However, no culture will be specified in the project file with the UICulture tags. You must ensure that the application defaults to English for those regions that are not localized. What should you do? A. Add the following code segment to the AssemblyInfo file. `[assembly: NeutralResourcesLanguage("en-US", UltimateResourceFallbackLocation.Satellite)]` B. Add the following code segment to the Application constructor. `Thread.CurrentThread.CurrentUICulture=new CultureInfo("en-US");` C. Add the following code segment to the AssemblyInfo file. `[assembly: NeutralResourcesLanguage("en-US", UltimateResourceFallbackLocation.MainAssembly)]` D. Add the following code segment to the Application constructor. `Thread.CurrentThread.CurrentCulture=new CultureInfo("en-US");` Answer: A Explanation: Apply this attribute to your main assembly, passing it the name of the default culture whose resources are embedded in the main assembly. Optionally, you can pass a member of the UltimateResourceFallbackLocation enumeration to indicate the location from which to retrieve fallback resources. Using this attribute is strongly recommended. [http://msdn.microsoft.com/en-us/library/system.resources.ultimateresourcefallbacklocation\(v=vs.100\).aspx](http://msdn.microsoft.com/en-us/library/system.resources.ultimateresourcefallbacklocation(v=vs.100).aspx) and [http://msdn.microsoft.com/en-us/library/system.resources.neutralresourceslanguageattribute\(v=vs.100\).aspx](http://msdn.microsoft.com/en-us/library/system.resources.neutralresourceslanguageattribute(v=vs.100).aspx) QUESTION 87 You develop a Windows Presentation Foundation (WPF) application. The application runs on 64-bit machines only. The application architects want to store application settings in the registry. The users do not have write access to these settings. These application settings apply to everyone using the application. You need to read the application settings successfully from the registry. Which code segment should you use?
