 QUESTION 111You need to identify which component or components of Tier 2 of App1 can be deployed by using Server App-V. Which component or components should you identify? (Each correct answer presents part of the solution. Choose all that apply.) A.   The Web Server (IIS) server roleB.   Web applicationsC.   Windows servicesD.   WMI providersE.   Drivers Answer: BCD Explanation: Some of the features supported by Server App-V are the following:Windows Services: Server App-V includes the possibility to virtualize Windows Services in a different approach than the one we've seenin Desktop App-V. With Server App-V, the service is installed and placed in the OS as a normal installation of the server application. Thisway we can monitor it as any local service.Web applications hosted in IIS: We can virtualize web applications entirely (web sites, virtual directories and application pools) on IIS 6,IIS 7 and IIS 7.5. WMI: Server App-V Sequencer also captures the WMI providers and/or classes created during an installation.SQL Services Reporting Services: Even though SQL Server engine is not supported for virtualization, the applications that install SQLServices Reporting Services (SSRS) are supported.COM/DCOM/COM+ objects: These components are registered in the deployment process, this way other applications in the server canaccess them.Local users and Groups: If the application is creating users and/or groups during the installation, the Server App-V Sequencer captures itand maintains, including SID, for next deployments.Not all applications are supported for use with Server App-V. Applications such as antivirussoftware thatrequire device or kernel driver support are not supported. Server App-V is primarily designed for use withbusiness applications or the business tiers of multi-tiered applications. Consequently some large serverapplications such as Microsoft Exchange Server, Microsoft SQL Server, and Microsoft SharePoint are notsupported. While there is no list of supported applications for use with Server App-V, Server App-V has beenoptimized to create virtual application packages for applications with the following attributes:State persisted to local diskMicrosoft Windows ServicesInternet Information Services (IIS)RegistryCOM+ / DCOMText-based Configuration FilesWMI ProvidersMicrosoft SQL Server Reporting ServicesLocal Users and GroupsScheduled TasksMicrosoft SQL Server Databases QUESTION 112You need to recommend a solution to identify which servers should be virtualized. What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   Microsoft Assessment and Planning (MAP) ToolkitB.   Configuration Manager P2V Migration ToolkitC.   Microsoft System Center Advisor (SCA)D.   Windows Assessment and Deployment Kit (Windows ADK) Answer: A QUESTION 113You need to recommend a configuration for the SQL Server instance that will host the Service Manager database. The solution must meet the requirements for the planned private cloud infrastructure. What should you include in the recommendation? A.   Disable full-text search.B.   Install the SQL Server Integration Services (SSIS).C.   Enable case sensitivity.D.   Change the default collation. Answer: DExplanation:/The implementation of Service Manager must support French and English. QUESTION 114You need to recommend a patching solution for the VMM infrastructure. The solution must meet the requirements for the planned private cloud infrastructure. What should you recommend? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   Cluster-Aware Updating (CAU)B.   An Orchestrator runbookC.   VMM update remediationD.   A Service Manager workflow Answer: CExplanation: http://technet.microsoft.com/en-us/library/gg675088.aspxIncorrect:Not A. Cluster-Aware Updating (CAU) requires Windows Server 2012. The servers in this scenario are running Windows Server 2008 R2. QUESTION 115You need to recommend a storage fabric configuration for VMM. The solution must meet the requirements for the planned private cloud infrastructure. Which three actions should you recommend performing in sequence? (To answer, move the appropriate three actions from the list of actions to the answer area and arrange them in the correct order.)

Actions

Configure a storage array.

Install the Microsoft iSCSI Software Target component.

Allocate a storage pool to a host group.

Add a storage device.

Configure the iSCSI initiator.

Answer Area

Answer:

Actions

Configure a storage array.

Install the Microsoft iSCSI Software Target component.

Allocate a storage pool to a host group.

Add a storage device.

Configure the iSCSI initiator.

Answer Area

Configure the iSCSI initiator.

Add a storage device.

Allocate a storage pool to a host group.

QUESTION 116You need to recommend which configuration meets the high-availability requirement for the Orchestrator components. The solution must meet the requirements for integrating the System Center 2012 components. What should you recommend? (To answer, select the appropriate high availability configuration for each component in the answer area.) Answer:
QUESTION 117You need to recommend the method for installing VMM. The solution must meet the requirements for the planned private cloud infrastructure. What should you recommend? A.   Install VMM as a clustered service on a Hyper-V failover cluster.B.   Install VMM as a highly available virtual machine on a Hyper-V failover cluster.C.   Implement a Hyper-V NLB cluster and install an instance of VMM on each cluster.D.   Implement two non-clustered Hyper-V hosts and install an instance of VMM on a virtual machine on each Hyper-V host. Answer: A QUESTION 118You need to recommend a solution to control the provisioning of the virtual machines by the research department users. The solution must meet the requirements for managing services in the private cloud. What should you include in the recommendation? (More than one answer choice may achieve the goal. Select the BEST answer.) A.   VMM placement rules and capability profilesB.   VMM placement rules and Service Manager service offeringsC.   A separate VMM cloud for the research department usersD.   VMM custom properties and Orchestrator runbooks Answer: A Explanation:The Research department contains clustered Hyper-V hosts and standalone Hyper-V hosts. When research users deploy an instance of App1, the VMs in App1 must be highly available. Therefore, they must be deployed to the clustered Hyper-V hosts. A capability profile can specify that a VM must be highly available and a placement rule can ensure it is deployed to clustered Hyper-V hosts. A private cloud including the standalone Hyper-V hosts would not ensure this. QUESTION 119You need to recommend a configuration for the App Controller portal. The solution must meet the requirements for the planned private cloud infrastructure. What should you include in the recommendation? A.   Configure constrained delegation for the VMM computer account.B.   Create an App Controller user role.C.   Configure constrained delegation for the App Controller computer account.D.   Create an App Controller subscription. Answer: C QUESTION 120You need to recommend a configuration for the VMM network fabric. The solution must meet the requirements for managing services in the private cloud. What should you include in the recommendation? A.   Create a hardware load balancer.B.   Create a virtual IP (VIP) template.C.   Disable the Logical network matching setting.D.   Disable the Automatic creation of virtual networks setting. Answer: BExplanation:How to Create VIP Templates for Network Load Balancing (NLB) in VMM:http://technet.microsoft.com/en-us/library/hh335100.aspx   Braindump2go Promise All 70-247 Questions and Answers are the Latest Updated,we aim to provide latest and guaranteed questions for all certifications.You just need to be braved in trying then we will help you arrange all left things! 100% Pass All Exams you want Or Full Money Back!
